Jee Khen (JK) Wong

Senior Partner Solution Architect, APJ

Peter Choi

Alliance Director, APJ Partner Scale

Leading an EDW Migration to Databricks

Why migrate your EDW to Databricks?

Legacy data warehouses are
expensive anchors for every
enterprise — it's time to move

Legacy data warehouses

Expensive, limited and out-dated

Traditional on-premises
data warehouse

ORACLE

Data warehouse ***built
on a database.***

***Can only scale by
buying a bigger box.***

Appliance on-premises
data warehouse

teradata.

VERTICA

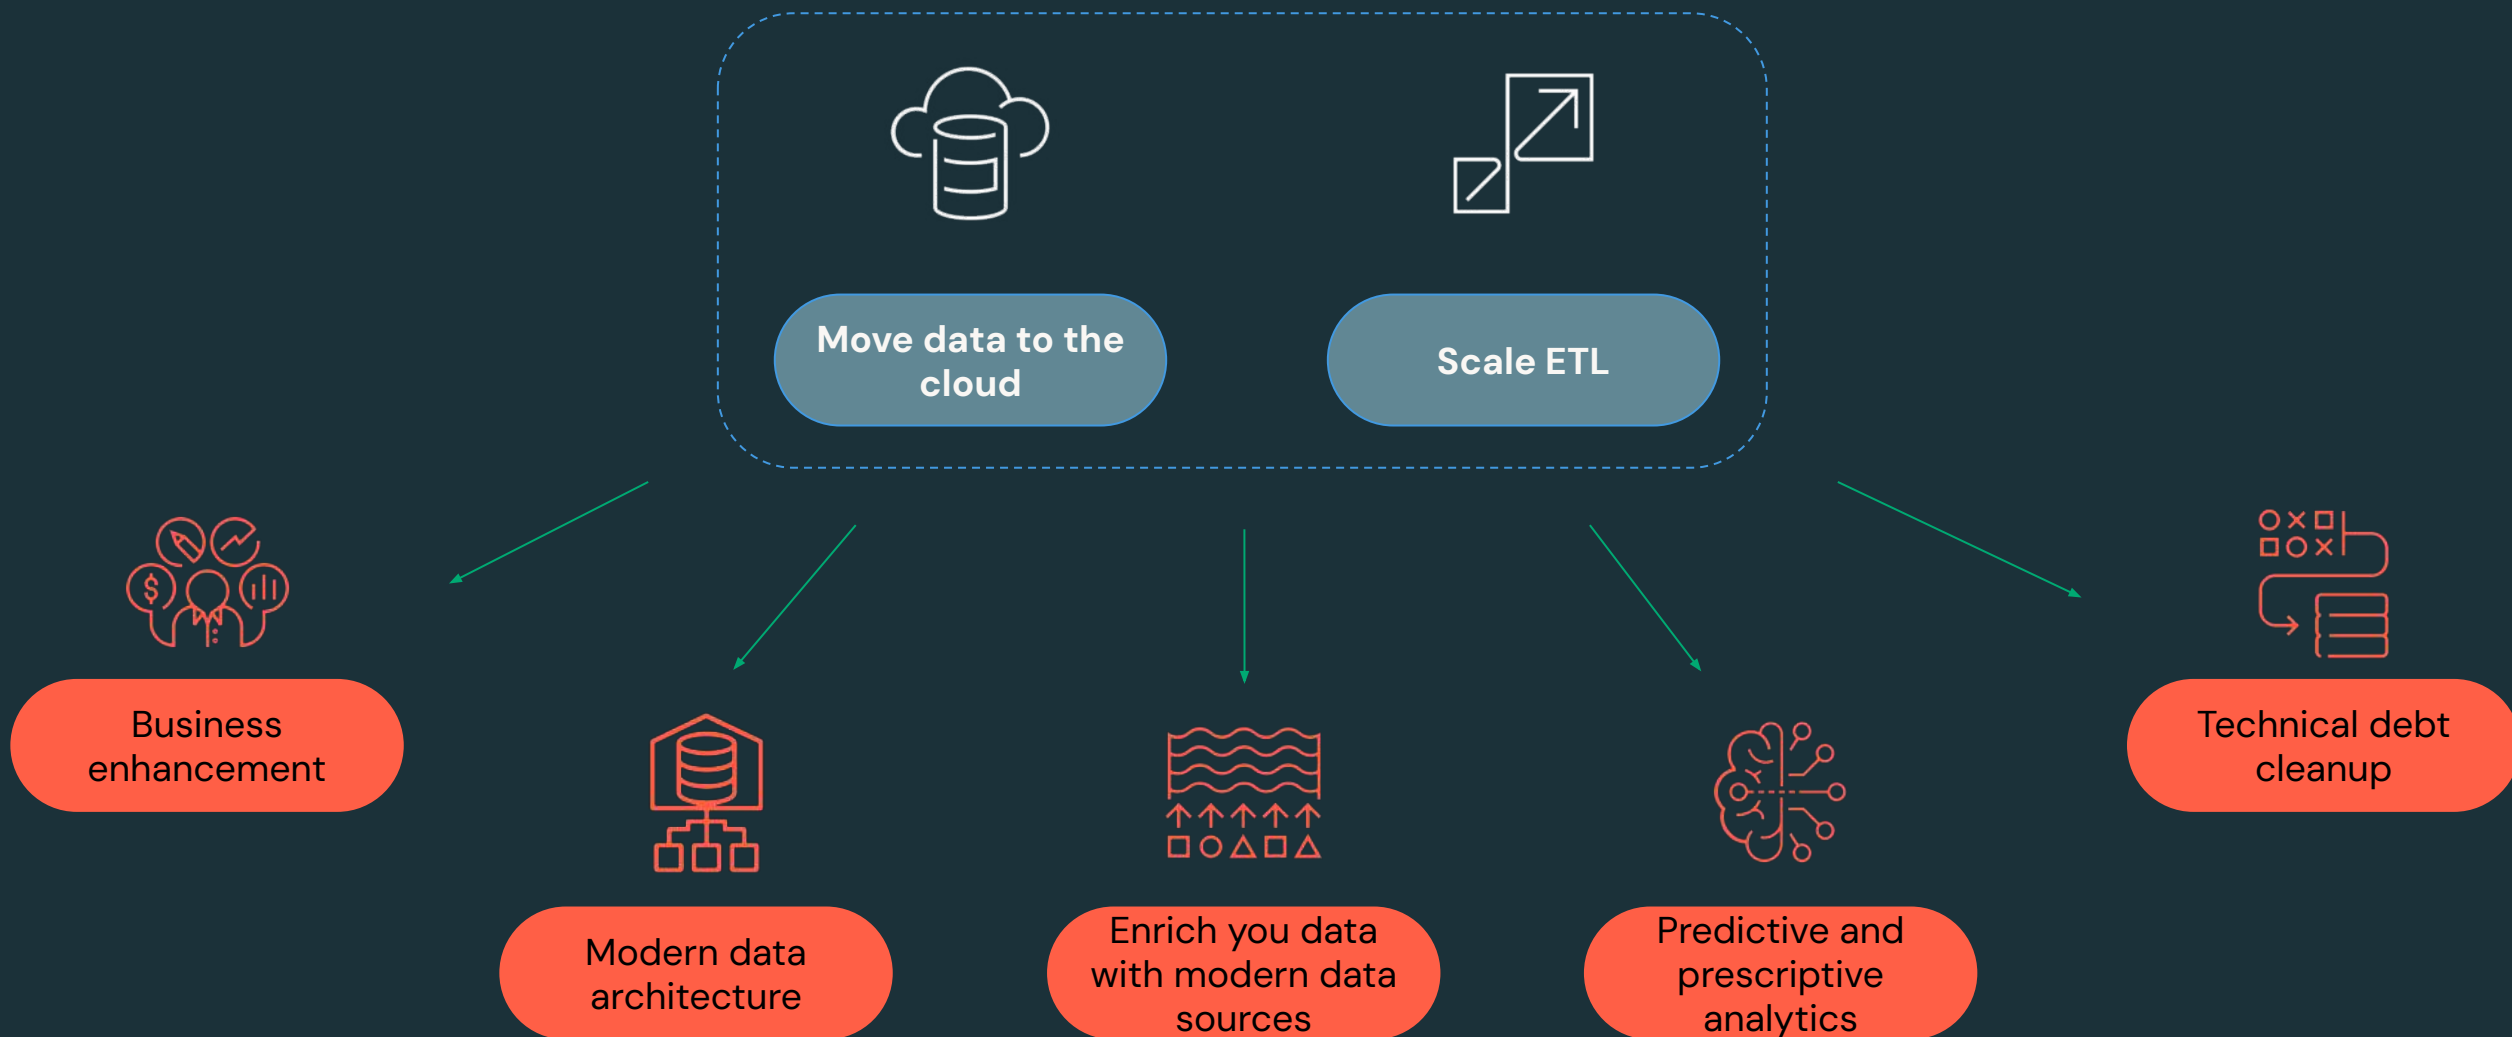

ORACLE[®]
EXADATA

Data warehouse ***in a
box.***

***Expensive.
Forced renewals.***

Why migrate your Data warehouse to Databricks?

What enterprises need from a new platform when migrating legacy warehouses

1

Lower cost

Makes financial sense within your time frame

2

Open: no lock-in

Portability with federation & integration

3

Governance

Unify governance to maximize value from all your data

4

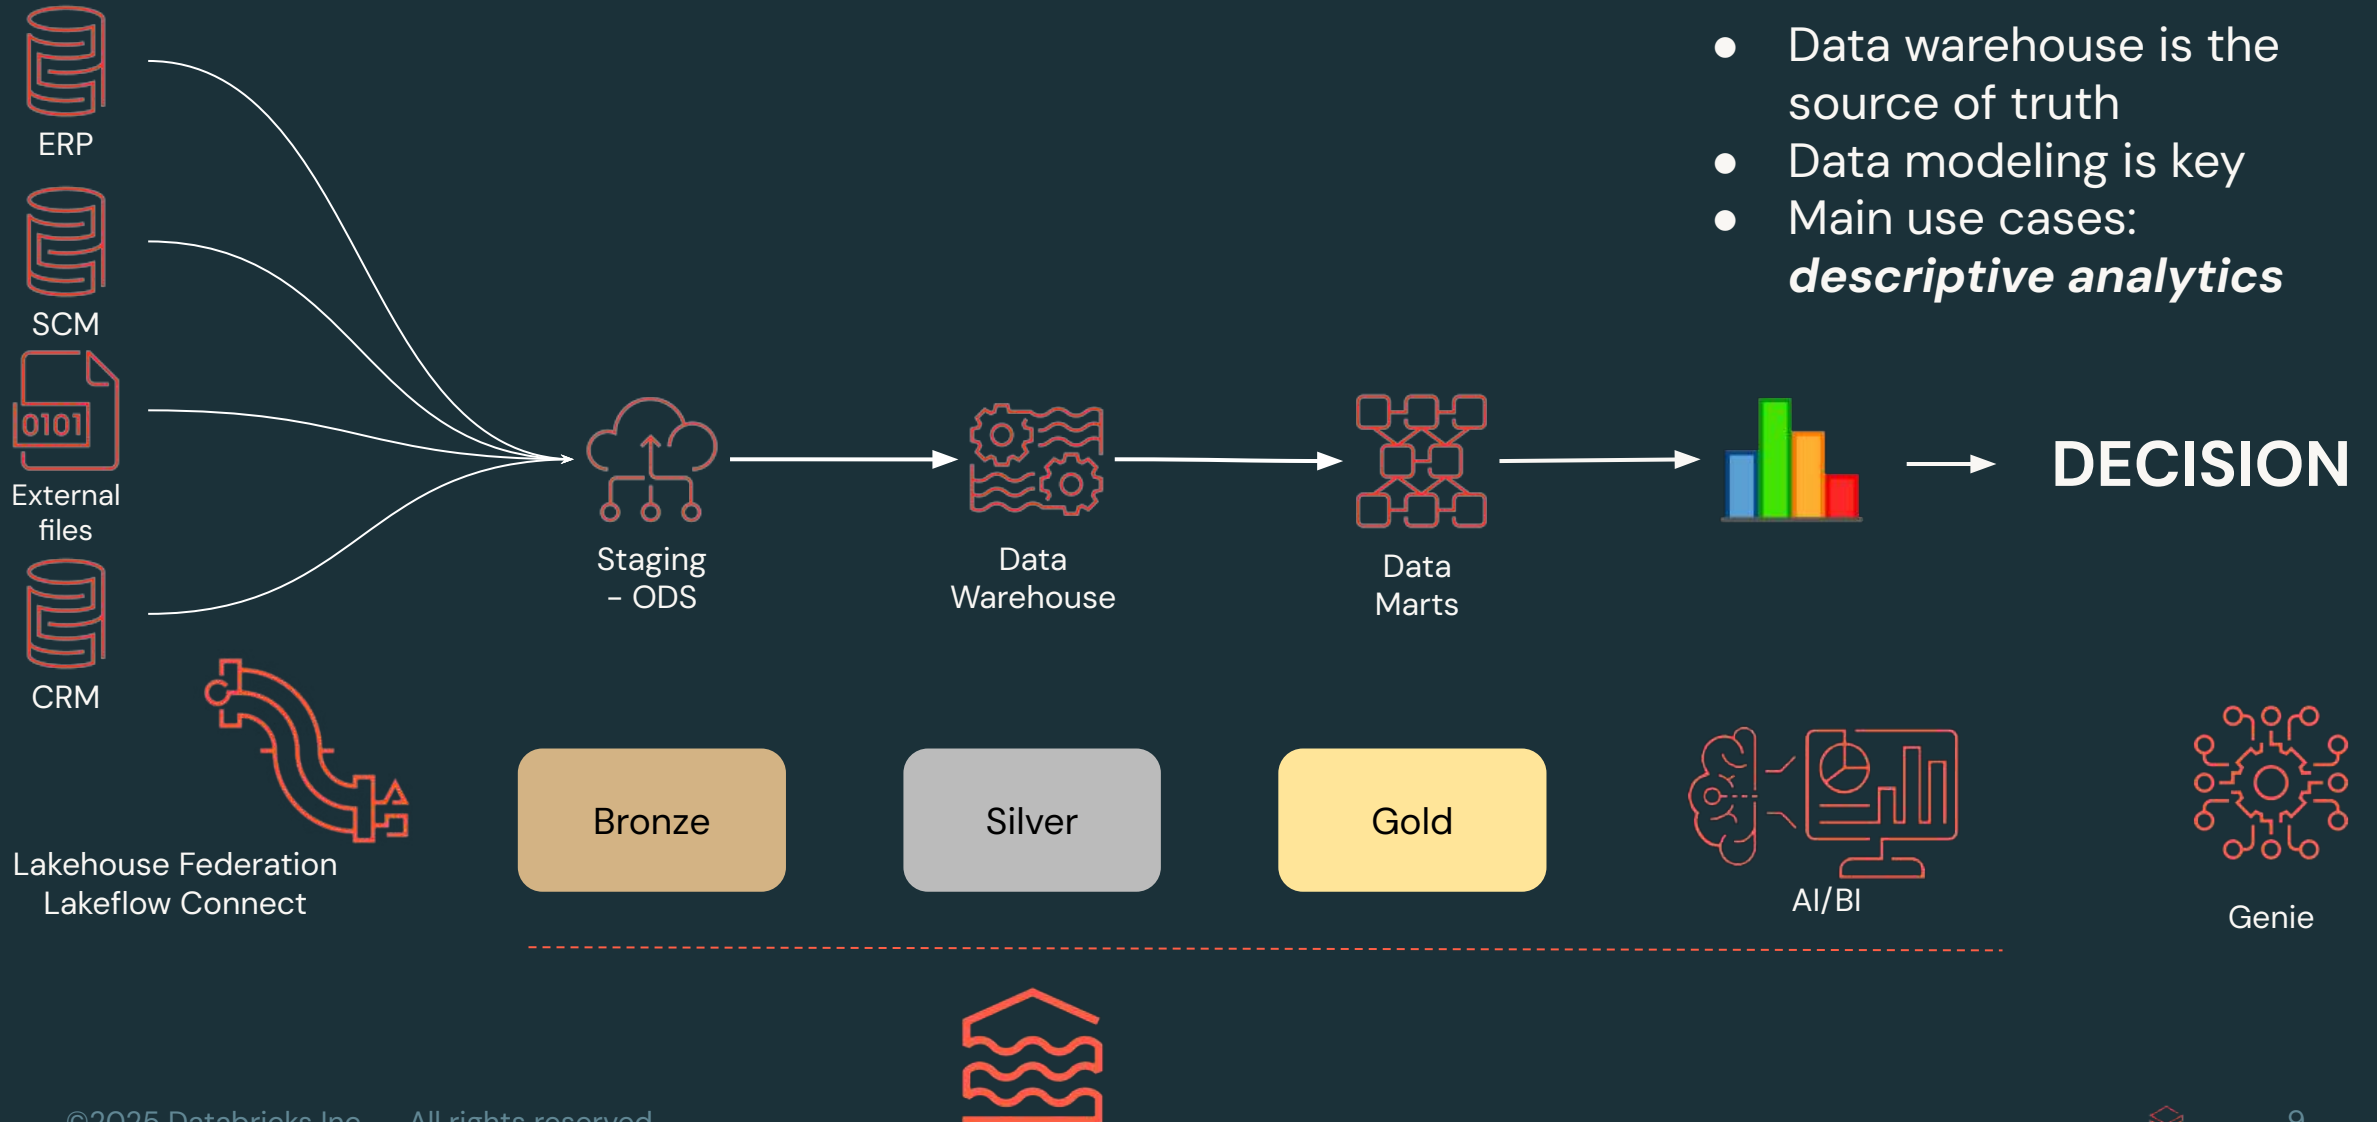

Risk assurance

Predictable migrations built on proven success & best practices

Databricks SQL benefits

Quick reminder on data warehouses

Journey to date.....

Migration approaches and customer perspectives

High-level migration approaches

Which approach to choose ?

Lift & Shift (L&S)

- Migration velocity
- Migration effort is linear to workload scale
- Limited effort to integrate ETL and BI reports/Dashboard

- Technical debt is also lifted and shifted
- Additional business requirements may force a modernization soon (ML, Real time decision making)
- Additional query/cost optimizations may be needed
- Data models and existing assets are moved "as-is"

**Lift &
Shift**

databricks

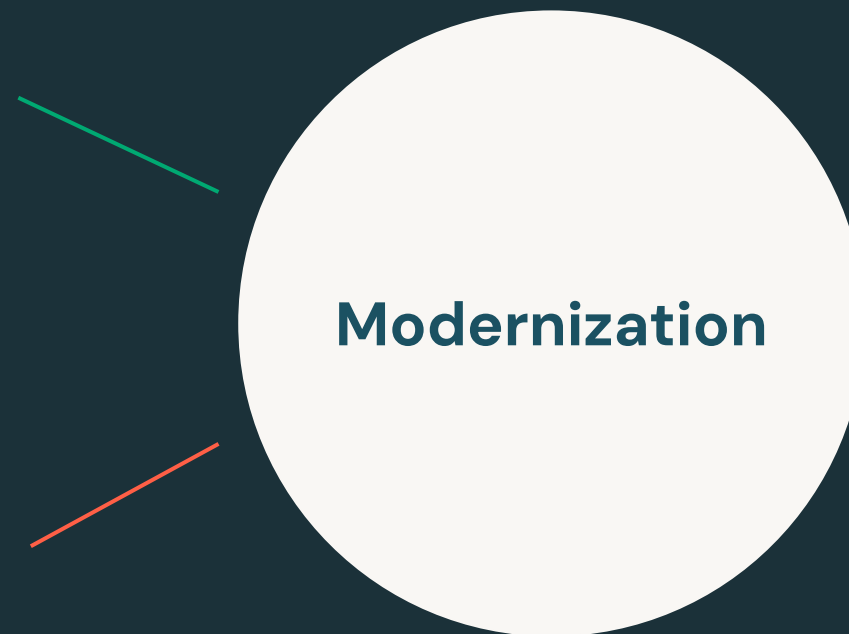

Which approach to choose ?

Modernization

- Ability to integrate new and modern business cases (ML, real time decision making, prescriptive analytics)
- New architecture capabilities (Lakehouse, Data Mesh integration, streaming architecture)
- Full optimized cost/performance

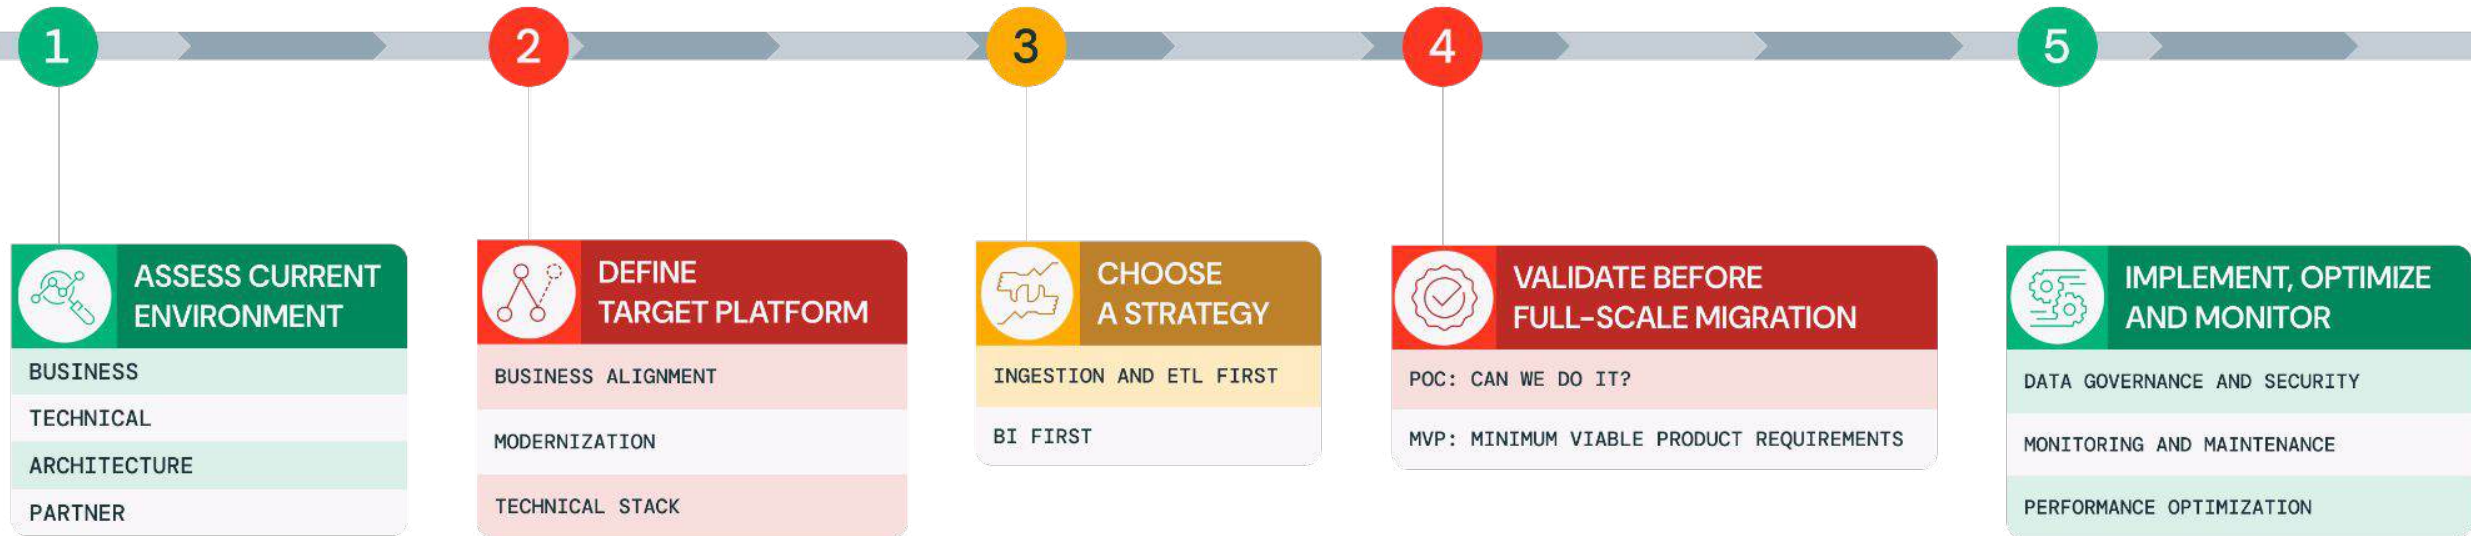

- Additional upfront assessment
- Plan to rewrite the existing ETL
- Automated conversion tooling used surgically

Transformation plan

DATA WAREHOUSE MIGRATION

Low-risk migration to a fast and open data warehouse
— Databricks SQL.

Migration Journey

1. Source
platform
assessment

2. Solution
design

3. Migration
strategy and
planification

4. Migration
plan validation

5. Full Scale
migration

Partner identification and alignment

Training & enablement

FinOps and cost optimization

Migration Journey

1. Source
platform
assessment

2. Solution
design

3. Migration
strategy and
planification

4. Migration
plan validation

5. Full Scale
migration

-1-

- Business cases inventory
- Technical artifact inventory per business case (Jobs, ETL, Data sources, database artifacts etc.)
- Code complexity assessment and platform profiling
- Security and governance assessment
- Current data architecture and model
- Partner identification (if possible)

Who ?

Databricks (SA/SSA), Partners

Migration Journey

1. Source
platform
assessment

2. Solution
design

3. Migration
strategy and
planification

4. Migration
plan validation

5. Full Scale
migration

-2-

- Business alignment on the target platform
- Architecture and data modeling design
- Network and security architecture
- Compliance requirements
- Performance requirements
- Integration requirements

Who ?

Customer, Databricks (SA/SSA), Partners

Migration Journey

1. Source
platform
assessment

2. Solution
design

3. Migration
strategy and
planification

4. Migration
plan validation

5. Full Scale
migration

–3–

- Prioritization of business cases to be migrated, modernized or added
- Migration tracks definition (if some of them could be executed in parallel)
- Choice of the migration methodology (Ingest-ETL first, Serving first)
- Architecture update (if relevant)
- User acceptance tests lists (technical and business)
- Definition of done agreement by business case

Who ?

Customer, Databricks
(SSA/PS), Partners

Migration Journey

1. Source
platform
assessment

2. Solution
design

3. Migration
strategy and
planification

4. Migration
plan validation

5. Full Scale
migration

-4-

- POCs
 - Validating the feasibility of a specific solution or technology
 - Answers the question: "Can we do it?"
- MVPs
 - Validate the migration strategy defined on 3. For a unique business case to be migrated
 - Answers the question: "Should we do it?"

Customer, Databricks
(SSA/PS), Partners

Who ?

Migration Journey

1. Source
platform
assessment

2. Solution
design

3. Migration
strategy and
planification

4. Migration
plan validation

5. Full Scale
migration

–5–

- Executing the validated migration plan on the full set of business cases established during the assessment.

Who ?

Customer, Databricks (PS), Partners

Methodology and migration tooling

Make a detailed inventory

Business cases

- Will act as an atomic unit for the whole migration
- Define dependencies between business cases
- Prioritize the migration process

Business case 1

Business case 2

Business case 3

New Business case 1

ETL process / Code logic

- 3rd party ETL software
- Internal ETL (usually using stored procedures)

Database artifacts

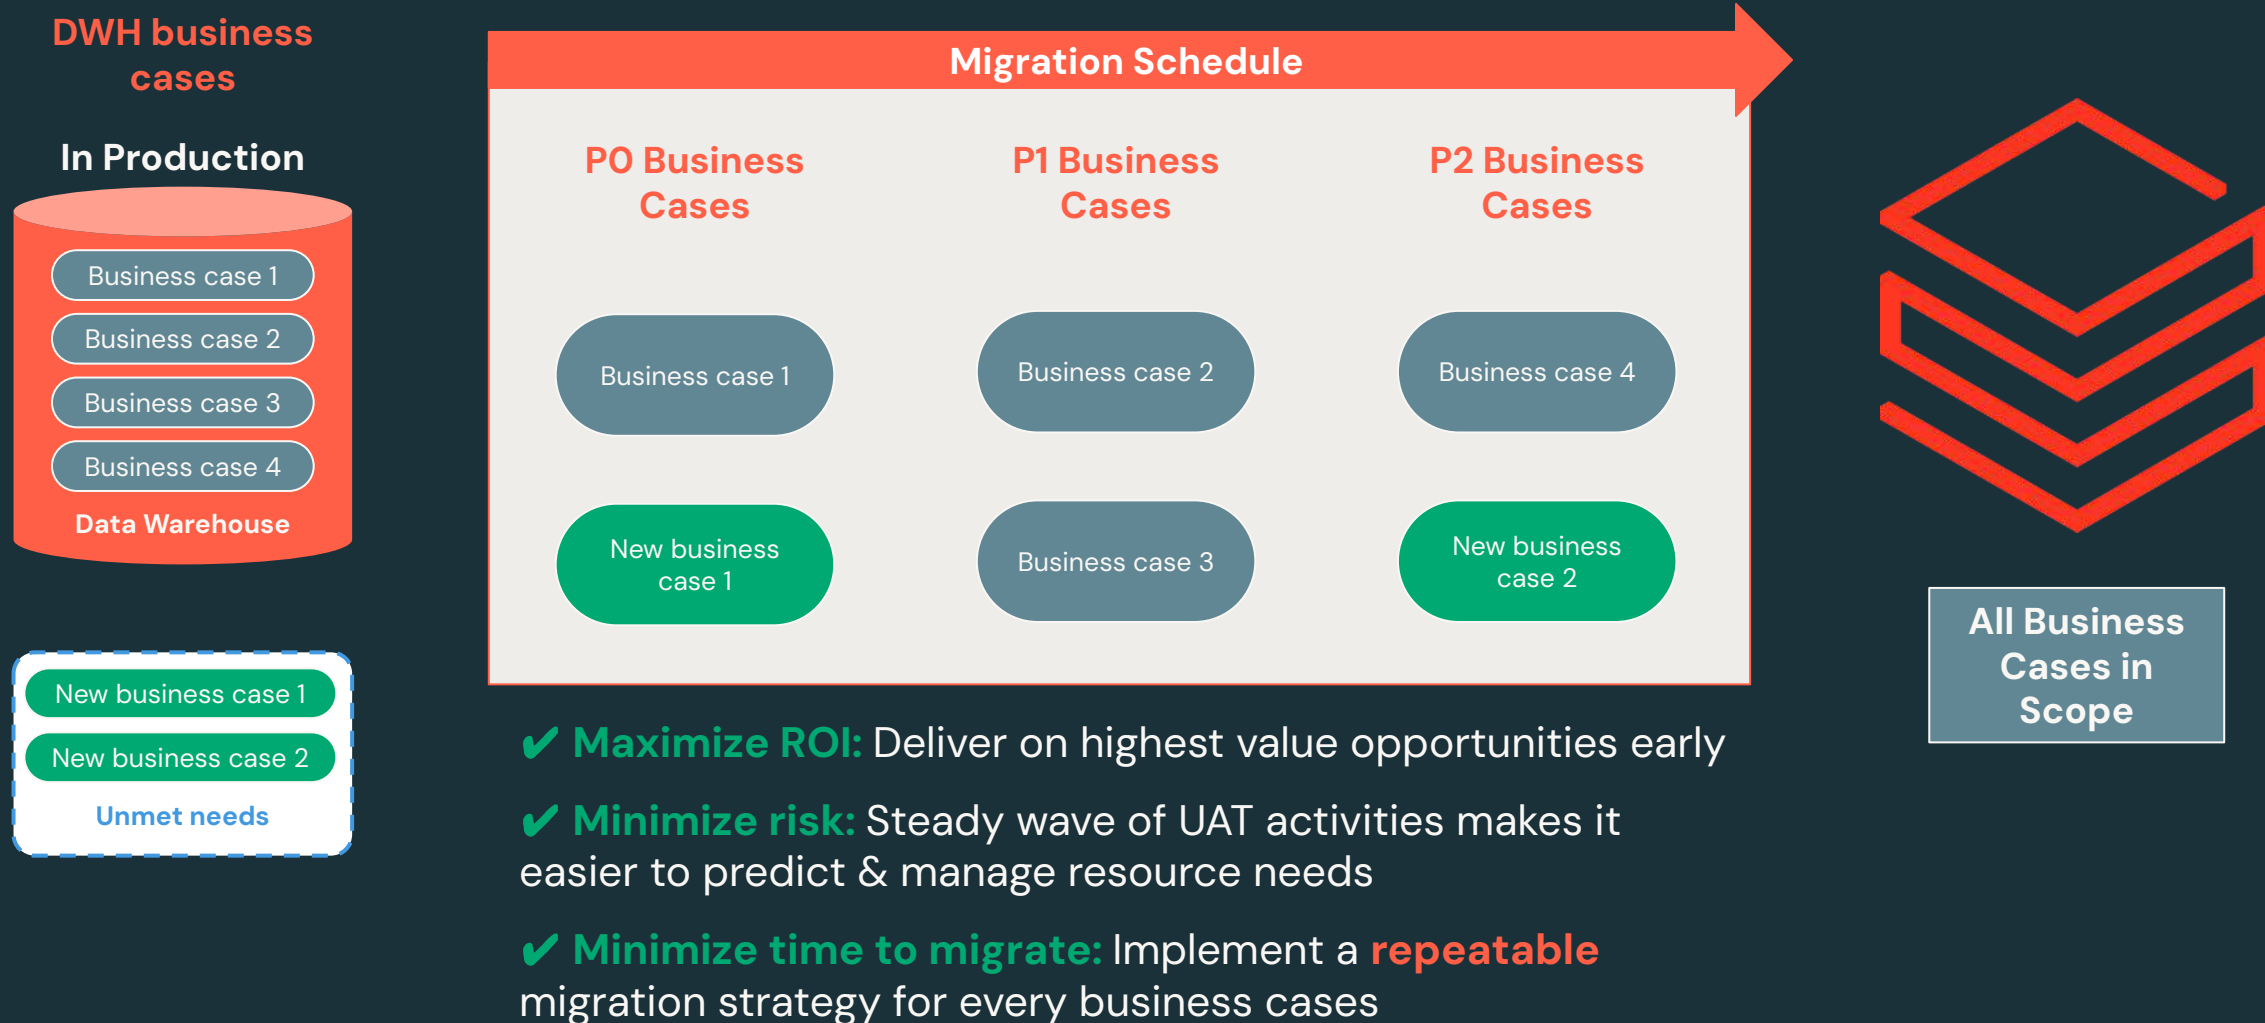

- Tables, index types and indexes, views, materialized views
 - Data types
 - Built-in stored procedures, UDFs, packages ...
- Etc.

Link these assets with identified business cases

Phased Decommissioning

Sequence the migration by business case

Lakebridge
e

Lakebridg
e

Lakebridge made it remarkably straightforward to work across different SQL dialects. It allowed our teams to quickly translate and execute queries. We valued the opportunity to contribute back, enhancing interoperability and fostering a collaborative data ecosystem.

Harsha Venkat Annapa Reddy

Engineering Manager

Our use of BladeBridge, now part of Lakebridge, has **accelerated migrations of complex legacy data warehouses**. We see significant improvements since the acquisition by Databricks and are excited by what Lakebridge AI will offer our customers.

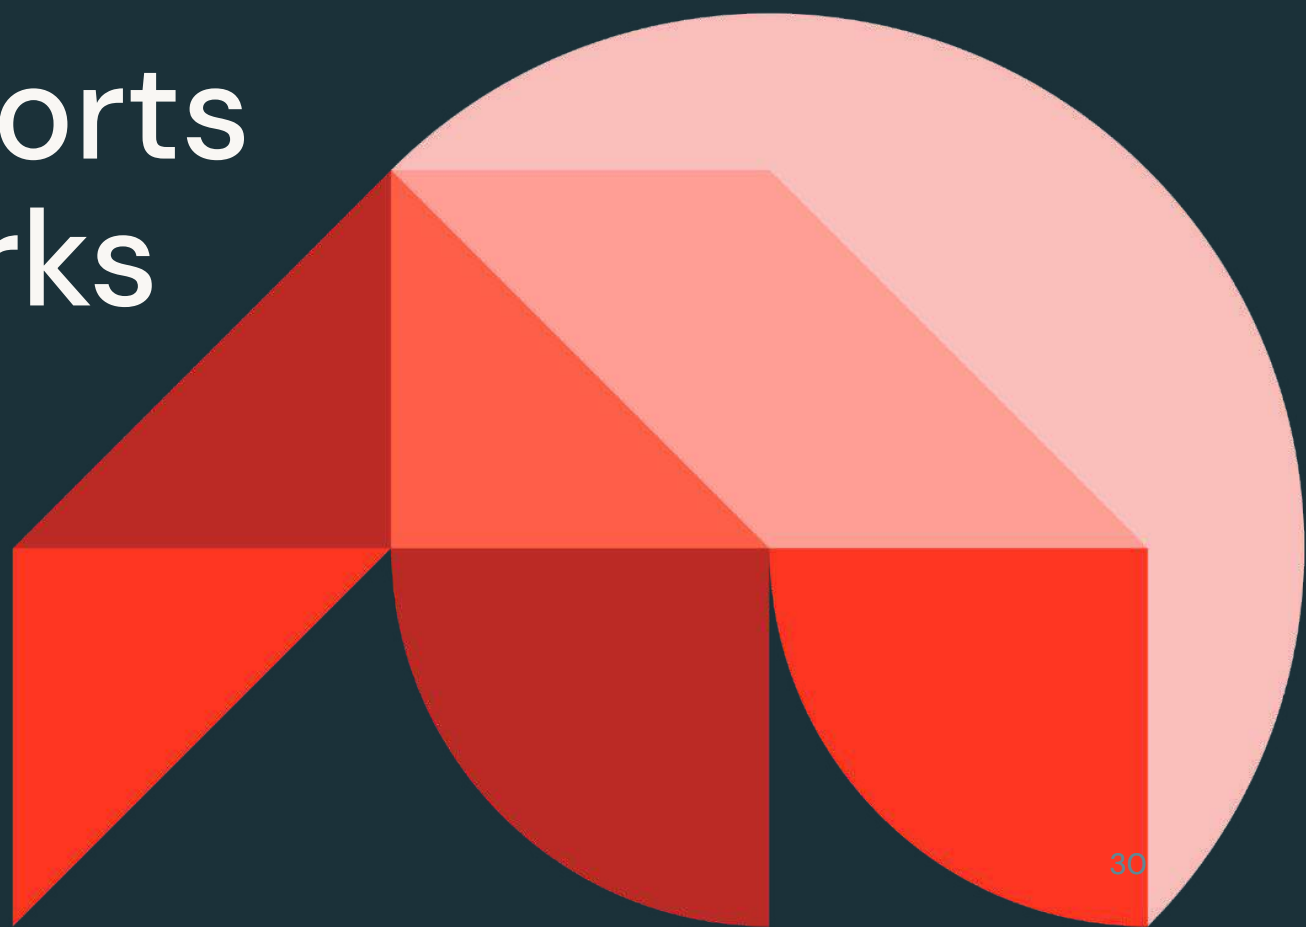

Jim Rowan

US Head of Applied AI

Deloitte.
